

Day 7 — Flow Bundle v1.1 Summary

Timestamp (Berlin): 2025-08-10 19:14

What changed today

- **Troponin Δ (0/1h) classifier** added with **assay-specific** cutoffs:
- **Roche Elecsys hs-cTnT**: rule_{in} 0h <5 ng/L, or 0h <12 and $\Delta 1h <3$; rule_{in} 0h ≥ 52 or $\Delta 1h \geq 5$ (ESC/Manufacturer)
- **Abbott ARCHITECT hs-cTnI**: rule_{in} 0h ≥ 64 ng/L (ESC 2020 update) or $\Delta 1h \geq 6$; rule_{out} 0h <2 ng/L band 2–5 with $\Delta 1h <2$ (note: imprecision near LoD).
- ECG path now consumes the troponin class (rule_{in} $\rightarrow$ **RED**; observe $\rightarrow$ **YELLOW** + automatic repeat).
- Unified loader now also brings in **Neurology**, **Psych**, and **System** packs.
- Synthetic demos updated for **both assays**.

What you still need to attend to

- 1) **Confirm local assay & units** with your lab (Roche hs-cTnT vs Abbott hs-cTnI; ng/L vs ng/mL). Update `ASSAYS` if different.
- 2) **Edge cases**: early presenters (<3 h symptoms), CKD, known CAD — keep clinical override; consider 0/2h path next.
- 3) **Role-targeted alert escalation** (nurse $\rightarrow$ resident $\rightarrow$ attending timers) — still off.
- 4) **Local antibiotic ladders** (CAP/COPD/sepsis) — wire when you share regimens.
- 5) Replace SOP_{Notaufnahme} **scaffolds** with exact steps once PDFs are available.

How to run

- Use the new notebook: `ed\_agent\_mesh\_FLOW\_BUNDLE\_v1\_1.ipynb` (run top_{to}bottom).
- Packs auto_{load} if the YAMLS are present in `/mnt/data`.
- Demos at the bottom show: ACS (Roche), ACS (Abbott), PE + CAP + Psych.

References (for thresholds)

- ESC 0/1h algorithm and performance overview; 0/2h as validated alternative.
- **Roche hs-cTnT** rule_{in}/out and $\Delta 1h$ thresholds (manufacturer brochure).
- **Abbott hs-cTnI**: ESC 2020 rule_{in} at **64 ng/L**; $\Delta 1h$ **6 ng/L**; rule_{out} **2 ng/L** single or **2–5** with $\Delta <2$; note analytical imprecision near LoD.

— End of day 7.
